ABSTRACTED-PUB-NO: BE 895969A

BASIC-ABSTRACT:

The cladding material is for floors, walls, columns, ceilings etc., and comprises a top layer of small planks (1) and an underlay (2). The underlay comprises a roll of flexible non-woven material such as sheet, coated on one side with durable contact adhesive, and onto which the planks, having a relatively high moisture content and also with a coating of durable contact adhesive, are stuck.

The side of the underlay not coated with adhesive can be covered with anti-slip material. Sections of cladding can be manufactured by sticking the planks to

the underlay, and then cutting through the latter round the periphery of a number of planks. FL
